Description of the course	The subject covers lexical and grammar topics as well as communication skills at the A1 level used in different areas compatible with the university educational profile and a field of study
Prerequisites	The course is open to all International Students and does not require any prior knowledge of the Polish language *In case of having prior Polish Language course, you may attend the Polish Language Continuation at various levels (by joining regular international students of WUEB)

Goals	<ol style="list-style-type: none"> 1. Developing four basic language skills (speaking, reading, writing, listening) at A1 level corresponding to the competencies defined by the Common European Framework of Reference for Languages (CEFR). 2. Sharing language knowledge: vocabulary, phrases, structures and intercultural competence necessary to build and support communication with target language users at A1 CEFR level of language proficiency. 3. Raising the awareness of continuous language competence updating and the need for lifelong learning.
Knowledge	<ol style="list-style-type: none"> 1. Student has a basic range of words and simple phrases used in most common situations in personal and professional life. 2. Student knows the name of the university, faculty and field of study. 3. Student knows simple grammatical structures and sentence patterns, enabling participation in simple communication situations at work and in everyday life.
Skills	<ol style="list-style-type: none"> 1. Student can use simple sentences to talk about people and places, can introduce themselves, and can ask and answer questions about personal details such as where they live or what they do. 2. Student can write simple expressions and sentences. 3. Student understands very short, simple texts, single phrases based on known names, words and basic expressions.
Social competencies	<ol style="list-style-type: none"> 1. Student has a pro-active attitude and can initiate social contacts on their own at the A1 CEFR level of language proficiency fluency. 2. Student is ready to fulfil professional roles responsibly within A1 level of CEFR of language proficiency. 3. Student is aware of the importance of a foreign language for communication and social relations.

Topics – classes	<ol style="list-style-type: none"> 1. Characteristics of the target foreign language - introduction 2. Greetings, saying goodbye and introductions (business and non-business context) 3. Self-presentation (academic and labour market context) 4. Countries, people 5. Family, friends (business and non-business context)
Topics – projects	<ol style="list-style-type: none"> 1. Personal details (business and non-business context)

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	50%	10%	10%	30%

Wroclaw University
of Economics and Business

Why should you choose a Polish language course while studying at Wroclaw University of Economics and Business?

- The Market Square, beautiful architecture, lots of green areas, an amazing number of stylish restaurants and cafes and lots of cool places – all this in Wroclaw! In your Polish classes, in addition to learning the Polish language, you'll learn interesting facts about Wroclaw and places worth noticing and seeing.
- Polish is the third largest Slavic language in the world. Compared to Russian or Ukrainian, the language is much easier to learn because it uses the same Latin letters as English, unlike the Cyrillic alphabet. The pronunciation of Polish also becomes easier because of this. Knowing Polish can help you learn other Slavic languages such as: Czech, Slovak, Serbian, Ukrainian or Russian.
- The Polish language is used by more than 58 million people, also you can speak Polish outside of Poland. A lot of people have emigrated from Poland. If you speak Polish, you can join a huge group of people in the United States. Polish communities tend to stick together. You can find Polish food stores and listen to Polish radio stations in the United States.
- By learning Polish, you give yourself the opportunity to learn about wonderful literature. You can read the works of Polish Nobel Prize winners like Wisława Szymborska and Olga Tokarczuk.

Description of the course	Students will learn practical issues of econometric modelling with the stress on the applicability. The model specification issues begin with understanding the empirical consequences of the adopted assumptions. The practicalities of choice and the execution of the parameters estimation process will be the next step, which covers understanding of strengths and weaknesses of the OLS estimation technique. The skill of the empirical application of econometric models and a linear regression model. Drawing conclusions from estimated models. Special issues of the empirical models construction cover estimation methods in the case of heteroscedasticity and autocorrelation of the error term. Searching for proper model specification: general-to-specific approach.
Prerequisites	Mathematics, statistics

Goals	Ability to carry out empirical data analysis and apply econometric models for empirical socio-economic problems.
Knowledge	<ol style="list-style-type: none"> Students know the techniques of application of econometric models. Students know the methods of concluding and formulating decisive recommendations from an estimated regression model.
Skills	<ol style="list-style-type: none"> Students are able to apply a simple and multivariate linear regression model for a given socio-economic problem. Students are able to use model estimation results (produced by themselves or someone else) to draw practical and decisive conclusions and make decisions regarding the given economic problem.
Social competencies	<ol style="list-style-type: none"> Students have the competence of an abstract understanding of the relationships and interdependencies between socio-economic variables that may be combined in the econometric model and apply test procedures to evaluate the model quality. Students can apply modern econometric methods for assessing and predicting socio-economic phenomena.

Topics – classes	<ol style="list-style-type: none"> Examples of applications of econometric methods. Methods of analysis of relations of economic data: scatter plot, correlation coefficient. Simple regression model: introduction, Ordinary Least Squares (OLS) estimation (with standard errors), interpretation of parameter estimates, assumptions. Methods of empirical statistical inference: point estimation, interval estimation, hypothesis testing. Statistical hypothesis testing: test for the significance of correlation coefficient applied to real-life data. Modelling the practical problems. The tools: multiple regression model: introduction, estimation (with standard errors), interpretation of parameter estimates, properties of the OLS estimators. Examples of applications of multiple regression models. Empirical testing of the model quality. The goodness of fit. Hypothesis testing: t-test, F-test. Normality of the disturbance term. Heteroskedasticity and autocorrelation of error term: introduction, consequences, detection. Specification studies, model selection, multicollinearity, general-to-specific vs specific-to-general approach, omitted variables problem.
Topics – projects	Regression model for a given economic problem – an empirical analysis. Application of econometric methods for real-life decision models.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	0%	75%	25%

Description of the course	The course aims to present the importance of the Balanced Scorecard in performance measurement and management. Students should learn how the Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The Balanced Scorecard implementation cases in the private and public sectors are discussed.
Prerequisites	Students should have basic knowledge in management, strategic management, accounting and corporate finance.

Goals	<ol style="list-style-type: none"> 1. The students receive knowledge about the Balanced Scorecard's role in a company. 2. The students know how to create the Balanced Scorecard.
Knowledge	<ol style="list-style-type: none"> 1. The students know and understand the role of the Balanced Scorecard in a company. 2. The students know the structure of the Balanced Scorecard.
Skills	<ol style="list-style-type: none"> 1. The students can assign goals and measures in four perspectives of the Balanced Scorecard. 2. The students can create a strategy map for a company.
Social competencies	<ol style="list-style-type: none"> 1. The students analyse the cases of Balanced Scorecard implementation. 2. The students create the Balanced Scorecard for chosen company.

Topics – classes	<ol style="list-style-type: none"> 1. Introduction to performance measurement and the Balanced Scorecard. 2. Measures, targets and initiatives in the Balanced Scorecard. 3. Developing the strategy map. 4. Using the Balanced Scorecard as a strategic management system. 5. Cases of the Balanced Scorecard implementation in the private sector. 6. Cases of the Balanced Scorecard implementation in the public sector.
Topics – projects	<ol style="list-style-type: none"> 1. Evolution of the Balanced Scorecard. 2. The Balanced Scorecard for chosen company.

Description of the course	This course aims to develop students' basic knowledge and skills in internal auditing. It provides participants with the necessary knowledge of governance, its principles and different roles and responsibilities within governance. Students develop their understanding of enterprise risk management and internal control in a variety of frameworks. Based on this knowledge, students can identify how internal auditors evaluate and improve risk management, control and governance processes in organisations. During this course, students develop their skills to cope with tasks that internal auditors face in their business practice when they develop an annual audit plan. The course consists of lectures supported by PowerPoint presentations. Students are encouraged to discuss presented problems. Students work in groups to solve a multistage case study. It is an opportunity to discuss among teammates and the group.
Prerequisites	Basics of Management

Goals	To apply relevant knowledge and skills and exercise professional judgement in determining an annual internal audit plan
Knowledge	<ol style="list-style-type: none"> The student knows internal auditing value, definition, process and its role in an organisation The student understands governance, risk management and internal control systems in a variety of frameworks The student is acquainted with internal audit standards
Skills	<ol style="list-style-type: none"> The student is able to document simple process flows, showing key process steps, interfaces, and departments involved The student can identify and assess the key risks to an organisation's objectives
Social competencies	<ol style="list-style-type: none"> Students should be able to share their newly learned skills with others. The student understands and accepts the need for continuous professional development of the internal auditor

Topics – classes	<ol style="list-style-type: none"> Fundamental Internal Audit Concepts Governance and Risk Management Business Processes and Risks Internal Control
Topics – projects	Annual audit plan and plan of the assurance engagement for Pizza Inc.

	Control work	Individual projects	Group projects	Activity in class

Course syllabus	BUDGETING AND FINANCIAL PLANNING		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	0 h	15 h

	Name	Email	Room
Author of the syllabus	Joanna Dyczkowska	joanna.dyczkowska@ue.wroc.pl	Z-504
Instructors	Joanna Dyczkowska	joanna.dyczkowska@ue.wroc.pl	Z-504

Description of the course	<p>The course offers a practice-oriented approach to budgeting and financial planning. It provides participants with the necessary knowledge and skills to cope with tasks that employees of financial departments face in their business practice. The course consists of mini-lectures supported by multimedia presentations (and electronic materials for students). The students are encouraged to discuss presented problems and examples.</p> <p>Moreover, the students analyse a multistage case study within computer labs. The IT workshops include group work, with presentations and discussions among participants.</p>
Prerequisites	Basics of Accounting, Management Accounting

Goals	<ol style="list-style-type: none"> 1. Explaining information, coordinating, motivating and control function of budgeting 2. Presenting the phases of a budgeting process and various budgeting methods 3. Indicating a role of internal reporting in budgeting and financial planning
Knowledge	<ol style="list-style-type: none"> 1. The student understands the budgeting process and knows its role in managing a business organisation. 2. The student is acquainted with various types of budgets, budgeting methods, a budget formation process and budgetary control. 3. The student knows how to monitor needs for financial resources and plan financial support for new initiatives and projects.
Skills	<ol style="list-style-type: none"> 1. The student can identify information flows and financial and organisational links between particular workplaces, teams, projects and business units. 2. The student is able to design a structure of budgets for a given company, including divisional, master and cash budgets. 3. The student is competent in evaluating budgets, detecting variances and analysing their origins.
Social competencies	<ol style="list-style-type: none"> 1. The student is able to work in a group, negotiate and influence other people's opinions on economic issues. 2. The student is able to use IT support to: develop budgets, perform what-if analyses, and visualise data. 3. The student is able to prepare professional presentations regarding budgeting and financial planning and hold them in front of the public.

Topics – classes	<ol style="list-style-type: none"> 1. Stages of the planning process 2. Budgeting and its function in an organisation 3. Budgets' development procedure 4. Financial planning 5. The organisation of a budgeting process 6. Phases of a budgeting process 7. Budgetary control 8. Budgeting methods 9. Management reporting in budgeting and financial planning 10. IT support for budgeting and financial planning
Topics – projects	<p>A group project.</p> <p>A project aims at developing quantitative, month-by-month, operating and financial budgets for a given organisation. As a result, a cohesive and integrated master budget and envisaged financial statements should be provided.</p> <p>The project consists of three parts:</p> <p>Part I – A concise business report including a written description of a company, basic assumptions and information necessary to prepare sub-budgets, a master budget and envisaged financial statements, and conclusions resulting from ratio and variance analyses.</p>

	Part II – Calculations needed to accomplish the project are presented in the form of tables or charts. The budgets should have standardised formats. Part III – Presentation of the project.

Description of the course	<p>The course incorporates a set of multidisciplinary methods and tools to assist students in bridging a process between their specific areas of studies and a workplace by creating innovative business ideas (for a new company, product or service), having in mind the European Market. The four pillars of the course include creative challenges, self-managed work in multinational creative venture teams, team coaching and professional presentations. The course has been developed by partners of the Competence in EuroPreneurship (COEUR) project from Germany (Mainz), Poland (Wrocław), Scotland (Aberdeen) and Finland (Helsinki), and it is delivered in a local or online mode (virtual cooperation between students from various COEUR partner universities).</p>
Prerequisites	None

Goals	<ol style="list-style-type: none"> 1. Students will become familiar with methods stimulating creativity and innovativeness of individuals, groups and the entire business organisations. 2. Students from all disciplines will be prepared for self-employment or intrapreneurial responsibility within a company in the European market.
Knowledge	<ol style="list-style-type: none"> 1. Understanding the creativity phenomenon and the importance of creativity to the market success of a business. 2. Comprehension of the new product development process and its stages. 3. Understanding a company foundation process.
Skills	<ol style="list-style-type: none"> 1. Design thinking. 2. Process management. 3. Testing technological and financial feasibility of innovative concepts.
Social competencies	<ol style="list-style-type: none"> 1. Enhancing creativity and innovativeness. 2. Being able to work in intercultural teams. 3. Making effective presentations to potential investors.

Topics – classes	<ol style="list-style-type: none"> 1. The phenomenon of creativity artistic vs problem-solving creativity, creativity techniques; spontaneous, productive, inventive, innovative and emergentive creativity; creativity roots, boosts, influences and blocks; the business development cycle (problem definition, idea generation, idea evaluation, implementation). 2. Types and sources of innovations technology-driven, culture-driven, space or time-driven innovations; research-based vs frugal innovations, different thinking. 3. Intercultural and virtual teamworking Culture and its dimensions, intercultural competencies in Europe, the EuroPreneurship concept, success factors of work in intercultural teams, virtual creative teams. 4. New product development categories of new products (new-to-the-world, new product lines, line additions, revisions, repositioned products, low-priced products); stages of NPD (idea generation, screening, concept testing, business analysis, product development, test marketing, commercialisation, monitoring and evaluation). 5. Market research problem definition, identification of a need, the definition of a target audience, finding communication channels. 6. Formulating a value proposition and a business model understanding value, value drivers, value decomposition, value-adding, customer perceived value, business model and value proposition canvas (gains and pains).
------------------	--

	<p>7. Financing innovative concepts financial support to start-ups in Europe, business angels, venture capital, crowdfunding, entrepreneurship models.</p> <p>8. Developing and managing start-up companies the foundation process, challenges and success factors, protection of intellectual property, me as an entrepreneur.</p> <p>9. Effective business presentations Content of a pitch deck, selection of facts, visual format, preparation for Q&A session, mastering spoken presentations, sharing responsibilities in a team.</p>
Topics – projects	<p>1. Inspiring organisation (20%) presentation (in pairs or small groups) of a profile of a business organisation, the activities of which may be inspirational in the context of creativity and innovations.</p> <p>2. The value proposition pitch (35%) 10-minute pitch to a jury panel (performed by teams) which presents the motivation, the creative opportunity, the market, the product/the service and the unique selling proposition, followed by a Q&A session</p> <p>3. The business report (45%) The final report explains the innovative concept developed by teams focusing on such success factors as the degree of novelty, market and needs, feasibility and scalability.</p>

Course syllabus	BUSINESS IN THE DIGITAL ECONOMY		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
30 h	30 h	0 h	0 h

	Name	Email	Room
Author of the syllabus	Mikołaj Klimczak	mikolaj.klimczak@ue.wroc.pl	B-220
Instructors	Mikołaj Klimczak	mikolaj.klimczak@ue.wroc.pl	B-220

Description of the course	Markets in the digital economy differ significantly from traditional products' markets. Music, films, and computer programs can be reproduced at virtually no cost, and the Internet and digital media allow easy and fast search for content of interest to buyers and comparison of offers and prices. This course aims to familiarise students better with both the technological and legal foundations of digital product exchange and attempts at theoretical analysis of the phenomena occurring in these markets. However, the primary goal of the course is to enable students to freely navigate, analyse, and make informed decisions related to the digital economy.
Prerequisites	Microeconomics

Goals	<ol style="list-style-type: none"> To enable students to freely navigate, analyse and make informed decisions related to digital goods and online services. Familiarisation with attempts at theoretical analysis of phenomena occurring in the digital economy and their impact on business.
Knowledge	<ol style="list-style-type: none"> Students should possess knowledge about the theoretical economic framework of analysis of the digital economy.
Skills	<ol style="list-style-type: none"> Students should be able to distinguish and describe various effects occurring in the digital economy. Students should describe various new business models which emerged in the process of development of the digital economy.
Social competencies	<ol style="list-style-type: none"> Students should comprehend the technological, legal, and ethical boundaries of the digital economy. Students should assess, criticise new business models and evaluate their usefulness in various conditions and situations.

Topics – classes	<ol style="list-style-type: none"> Basic concepts and issues: digitisation, existence in excess, networks. Network effect: types and business applications. Power law – measuring popularity in the digital economy. Business models in the digital economy: typologies, business model components, the most common approaches. Revenue models. Pricing strategies – an overview, differences between traditional and digital economy. Monetisation logic in the digital economy. Product strategies in the digital economy: versioning. Switching cost and lock-in effect. Standardisation as a competitive strategy.
Topics – projects	Which of the business models, strategies and developments in the digital economy discussed in this unit are relevant to your chosen business? Analyse your chosen company in a specific market, providing your own analysis of the business model, revenue model and strategies used in the context of the particular characteristics of the digital economy.

Description of the course	The course is dedicated to the topic of negotiations with a special focus on business negotiations. The negotiation strategies, the negotiation process, the features of a negotiator and the international context of negotiations are the main topics. The course is based not only on studying the theory, but a significant part is delivered in the form of workshops. Students gain knowledge and skills and review their predispositions to become successful negotiators.
Prerequisites	Subjects or competencies required to participate in the course effectively: General knowledge in the field of management.

Goals	<ol style="list-style-type: none"> 1. Delivering knowledge about negotiations. 2. Improving students' skills as negotiators.
Knowledge	<ol style="list-style-type: none"> 1. Delivering knowledge about the strategies of negotiations. 2. Delivering knowledge about the process of negotiations. 3. Delivering knowledge about the international context of negotiations.
Skills	<ol style="list-style-type: none"> 1. Improving skills in preparation, conducting and evaluating the negotiations. 2. Improving skills by understanding the personal negotiating style.
Social competencies	<ol style="list-style-type: none"> 1. Gaining the competency of working together with other students as a negotiating team. 2. Gaining the competency of understanding the context (including international) of negotiations.

Topics – classes	<ol style="list-style-type: none"> 1. The nature of negotiation. 2. Phases of the negotiation process. 3. Communication in negotiations. 4. Strategy and tactics of distributive bargaining and integrative approach. 5. Negotiation styles. 6. Negotiation simulation.
Topics – projects	International and cross-cultural negotiations

Course syllabus	BUSINESS PROCESS MANAGEMENT		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	0 h	15 h

	Name	Email	Room
Author of the syllabus	Andrzej Niesler	andrzej.niesler@ue.wroc.pl	Z-711
Instructors	Andrzej Niesler	andrzej.niesler@ue.wroc.pl	Z-711

Description of the course	The course is an introduction to Business Process Management as a structured approach to understanding how organizations conduct business operations in terms of processes and how these processes can be improved in order to increase the cumulative business value efficiently. The focus is on creating and using process models and their role in the BPM life cycle – from the early stage of process discovery, through process analysis and redesign, up to the implementation in a fully automated business environment with process-aware information system. For modelling, students use the BPMN notation and have access to the SAP Signavio Process Modeler online platform.
Prerequisites	None

Goals	Introduction to the theoretical and practical foundations of business process management.
Knowledge	<ol style="list-style-type: none"> 1. Knowledge of the essential concepts of process orientation and business process modelling with regard to the role of modelling and IT-driven automation. 2. Understanding of the importance of process models in business process management.
Skills	Ability to identify, document, analyze, and creatively redesign business processes using BPMN models and modern analytical techniques and tools.
Social competencies	<ol style="list-style-type: none"> 1. Competence in discerning business processes in the corporate milieu and accurately diagnosing the situation, i.e., students can formulate appropriate optimization assumptions, apply scientific improvement measures, and advise on selecting suitable solutions. 2. Awareness of the role that modelling plays in business process management and automation, especially with the support of modern IT solutions.

Topics – classes	<ol style="list-style-type: none"> 1. Introduction to Business Process Management <i>The Ubiquity of Processes, Definition of a Business Process, History and Origins of BPM, The Role of Business Process Models, BPM Lifecycle.</i> 2. Process Identification. <i>Business Process Landscape, Definition of Process Architecture, Process Selection Criteria and Performance Measures.</i> 3. Essential Process Modeling. <i>BPMN 2.0 Core Elements: Activities, Gateways, Resources, Data Objects, Sequence Flow; Hierarchical Process Decomposition, Model Reuse.</i> 4. Advanced Process Modeling. <i>Rework and Repetition, Business Events and Interaction Through Messages, Handling Exceptions, Processes and Business Rules.</i> 5. Process Discovery. <i>Settings and Methods of Process Discovery, Process Modeling Method, Business Process Model Quality Assurance.</i> 6. Qualitative Process Analysis. Value-Added Analysis, Waste Analysis, Stakeholder Analysis and Issue Documentation, Root Cause Analysis. 7. Quantitative Process Analysis. <i>Flow Analysis, Cycle Time Efficiency, Critical Path Method, John Little's Law, Queues and Queuing Theory, Process Simulation.</i> 8. Process Redesign. Product vs Process Innovation, Redesign Concepts, The Devil's Quadrangle, Redesign Heuristics, Transactional and Transformational Methods. 9. Process-Aware Information Systems (PAIS).
------------------	--

	<p><i>PAIS Typology, Advantages and Challenges of Introducing a Business Process Management System (BPMS).</i></p> <p>10. Process Implementation with Executable Models. <i>Identification of Automation Boundaries, Review of Manual Tasks, Completion and Granularity Level of Business Process Models.</i></p> <p>11. Process Monitoring. <i>Process Performance Dashboards, Introduction to Process Mining, Automated Process Discovery, Process Performance Mining, Conformance Checking.</i></p> <p>12. BPM as an Enterprise Capability. <i>BPM Success Barriers, BPM Maturity Levels, Success Factors of BPM Maturity, Business Process Maturity Measurement.</i></p>
Topics – projects	<ol style="list-style-type: none"> 1. Process identification and discovery: verbal description of a business process. 2. Creating a descriptive business process model with BPMN. 3. Process improvement: select analytical techniques and redesign heuristics.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	50%	30%	15%	5%

Description of the course	This course aims to cover a broad spectrum of topics related to conducting applied research in the business environment. It offers a unique introduction to empirical and design research, with practical references and interdisciplinary case studies. The main focus is developing the student's research skills, which facilitate an in-depth understanding of business phenomena, facing opportunities and competitive challenges, and finding reliable, science-based solutions to emerging problems. The formula of the course also includes consulting individual research projects and diploma theses.
Prerequisites	None

Goals	<ol style="list-style-type: none"> 1. Introduction to the fundamentals of business research. 2. Individual consultations on diploma theses or research initiatives.
Knowledge	<ol style="list-style-type: none"> 1. Student knows the core business research concepts. 2. Student knows the contemporary empirical and design research methods. 3. Student understands the research process and tools.
Skills	<ol style="list-style-type: none"> 1. Student can identify and define a business research problem. 2. Student can apply scientific methods and research tools to solve business problems. 3. Student can write a business research proposal.
Social competencies	<ol style="list-style-type: none"> 1. Student recognizes research opportunities in the business environment and is able to analyze and approach them in a scientific way. 2. Student communicates research ideas and study results in a structured way. 3. Student understands how research contributes to business success.

Topics – classes	<ol style="list-style-type: none"> 1. Introduction to business research. 2. Generating research ideas and identifying research problems. 3. Structuring a business research proposal. 4. Searching and critically reviewing the literature. 5. Research philosophies, approaches and strategies. 6. Formulating the research design. 7. Ethics in business research. Truth, bias, objectivity. 8. Business research methods and tools. 9. Design Science Research Framework. 10. Design artefacts in business research. 11. Case studies and individual consultations.
Topics – projects	<ol style="list-style-type: none"> 1. Individual assignment: identifying and defining an original business research problem, formulating research questions, and providing rationale and context. 2. Individual assignment: designing an artefact for a given research scenario. 3. Group project: writing a sample business research proposal.

Instructors	Andrzej Raszkowski	andrzej.raszkowski@ue.wroc.pl	A-41 (Jelenia Góra)

Description of the course	This course aims at presenting solutions to the main problems of city logistics: traffic congestion, pollution and noise, labour and safety issues and enhancing the quality of urban transport services for the clients and the economy. Moreover, social and technical city infrastructure issues will be discussed.
Prerequisites	None

Goals	<ol style="list-style-type: none"> 1. Identify core concepts of city logistics and the role of city logistics in local and regional socio-economic development. 2. Discovering the importance of city logistics in today's world. 3. Understanding city logistics processes.
Knowledge	<ol style="list-style-type: none"> 1. Definitions and basic information about city logistics. 2. Knowledge of city logistics strategies implementation. 3. Importance of cooperation in city logistics processes.
Skills	<ol style="list-style-type: none"> 1. Recognition of basic elements of city logistics. 2. The ability to implement city logistics elements and strategies in practice.
Social competencies	<ol style="list-style-type: none"> 1. Understanding the benefits of effective city logistics processes for society. 2. The ability to consult experts when difficulties arise. 3. Networking improvement.

Topics – classes	<ol style="list-style-type: none"> 1. Fundamental concepts and general approaches to city logistics. 2. City logistics as a relatively new and important area of urban study and urban management. 3. Modelling city logistics. 4. City logistics system. 5. Urban transport problems include high levels of traffic congestion. 6. Planning and efficient management of city logistics schemes. 7. City logistics in the context of sustainable city development. 8. Success factors of city logistics in relation to city socio-economic development.
Topics – projects	City logistics problems and solutions based on the example of a selected city.

Author of the syllabus	Marta Dziechciarz-Duda	marta.dziechcarz-duda@ue.wroc.pl	Z-616
Instructors	Marta Dziechciarz-Duda	marta.dziechcarz-duda@ue.wroc.pl	Z-616

Description of the course	Students will learn how to choose and apply the computer software tools appropriate to analyse the socioeconomic data (quantitative and qualitative). Students will learn to construct a simple or multivariate regression analysis for a given economic problem. Students will learn how to design economic research with steps including data preparation for analysis, issues of missing data, techniques of outliers detection, data comparability and reliability. Students will learn how to use selected software for case studies and empirical, real-life data examples to perform multivariate data analysis and how to present results using tables and graphical tools.
Prerequisites	Mathematics, Statistics

Goals	<ol style="list-style-type: none"> 1. Ability to carry out data analysis and construct a simple (univariate) or multivariate data analysis for a given economic problem with the appropriate presentation of results. 2. Ability to draw conclusions and make decision recommendations regarding a given economic problem.
Knowledge	Students know research design, data analysis, and result presentation techniques with the appropriate computer software tools.
Skills	Students have skills in designing economic research and mastering data analysis methods and techniques using software (MS Excel, Statistica, SPSS).
Social competencies	Students have the competence to discuss the strengths and weaknesses of data analysis methods and how they affect decision-making based on analysis.

Topics – classes	<ol style="list-style-type: none"> 1. Elements of the Analysis of Survey Data (e.g. data coding, preparing data for analysis, missing data, detecting outliers, descriptive statistics) and Basic Data Analysis (correlation analysis, regression analysis, ANOVA). 2. Advanced Data Analysis (e.g. measurement scales, data standardisation, linear ordering, cluster analysis). 3. Advanced Data Analysis (e.g. classification and regression trees). 4. Advanced Data Analysis (e.g. contingency tables; correspondence analysis, multidimensional scaling, factor analysis). 5. Conducting Data Analyses using Computer Tools: MS Excel and Statistica, SPSS. Preparing Presentation of the Research Results using Computer Tools.
Topics – projects	Empirical data analysis.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	0%	75%	25%

Literature	<ol style="list-style-type: none"> 1. Anderson T.W. (2003): <i>An Introduction to Multivariate Statistical Analysis</i>, John Wiley & Sons. 2. Hair J.F., Black W.C., Babin B.J. Description of the course	El objetivo de este curso es preparar a los estudiantes para realizar y comprender los informes sobre costes de los productos, líneas de negocio, rentabilidad de áreas geográficas, etc. Los estudiantes al finalizar este curso estarán familiarizados con los objetivos, fundamentos de los sistemas de contabilidad de gestión, características de su diseño y diferentes tipos de usos en la planificación y el control que se pueden dar a los datos de contabilidad de gestión. La metodología de enseñanza-aprendizaje comprende tres ámbitos: 1) desarrollo de un conocimiento técnico adecuado a través de lecciones magistrales; 2) desarrollo de habilidades a través de ejercicios a resolver; 3) desarrollo de habilidades a través de la resolución de casos.
Prerequisites	Conocimiento básico de la contabilidad financiera

Goals	<ol style="list-style-type: none"> 1. Realizar y comprender los informes sobre costes de los productos, líneas de negocio, rentabilidad de áreas geográficas, etc. 2. Familiarizar con los objetivos, fundamentos de los sistemas de contabilidad de gestión, características de su diseño y diferentes tipos de usos en la planificación y el control.
Knowledge	<ol style="list-style-type: none"> 1. Aprender los principales instrumentos de la gestión contable para la toma de decisiones. 2. Comprender la utilidad y alcance de las herramientas de la gestión contable. 3. Analizar y evaluar los resultados obtenidos a través de los modelos empleados.
Skills	<ol style="list-style-type: none"> 1. Capacidad para tomar decisiones. 2. Alcanzar los resultados de forma autónoma.
Social competencies	Adquirir un comportamiento ético en la contabilización.

Topics – classes	<ol style="list-style-type: none"> 1. Introducción a la contabilidad de gestión. 2. Clasificaciones y conceptos de costes. 3. Costes de órdenes de trabajo. 4. Costeo absorbente y costeo variable. 5. Análisis coste-volumen-beneficio. 6. Costes y gestión basados en actividades. Costeo por secciones.
Topics – projects	Solución y detección de problemas a través de la resolución de casos en grupos.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	90%	0%	10%	0%

Description of the course	The course discusses problems related to planning, control, coordination and reporting of activities in business organisations, in particular in manufacturing, service and commercial enterprises. Participants of the course will acquire the necessary knowledge and develop competencies required to perform the tasks entrusted to employees of controlling and management accounting departments. The course focuses on practice-oriented elements of controlling, which are trained via an original controlling simulation game played in teams.
Prerequisites	fundamental knowledge of accounting, finance and management

Goals	Students will be made familiar with the tasks of a controller in an enterprise or an institution, including various functional areas as well as operational and strategic perspectives.
Knowledge	<ol style="list-style-type: none"> 1. Understanding the controlling concept and being aware of its role in supporting business organisations. 2. Awareness of methods and tools applied in controlling. 3. Familiarity with the concept of responsibility centres and evaluation of their performance.
Skills	<ol style="list-style-type: none"> 1. Preparing and evaluating budgets, detecting variances and interpreting them. 2. Designing ratios for controlling purposes and interpreting their values. 3. Monitoring the economic situation of a business organisation.
Social competencies	<ol style="list-style-type: none"> 1. Obtaining, validating, selecting and systematising information for decision-making purposes 2. Working effectively in MS Excel by selecting appropriate functions and tools, detecting and avoiding errors, as well as visualising business data. 3. Presenting reports and conclusions effectively, including the right balance between numeric, narrative and visual elements.

Topics – classes	<ol style="list-style-type: none"> 1. Controlling in business organisations the controlling concept, functions and tasks of controlling, the evolution of a controller's profession, implementation of controlling in a business organisation. 2. Budgeting process the organisation of the process, budgeting methods (top-down, bottom-up, incremental, zero-based, rolling), budgetary control, variance analysis and reporting 3. Controlling in functional areas of a business Controlling for supply and the logistic chain, manufacturing, marketing, distribution and sales, human resources 4. Project controlling feasibility studies, cost-benefit analysis, scheduling, resources allocation, budgeting, progress analysis and reporting 5. Internal reporting: objectives of reports, selecting, structuring and prioritising information, presenting financial, quantitative and narrative information, validating reports
Topics – projects	<p>The controlling simulation game (played in teams over the entire semester). Throughout the simulations process, students learn how to:</p> <ul style="list-style-type: none"> • analyse performance-related data, • formulate an initial annual budget of a company, • conduct ongoing data analysis on a monthly (weekly basis), • recommend actions and business decisions and evaluate their effectiveness, • identify deviations from the plan and decide on quarterly adjustments, • prepare controller's presentation.

	The game's result and presentation of the company's performance contribute to 15% and 25% of the course evaluation, respectively.

Author of the syllabus	Anna Mempel-Śnieżyk	anna.sniezyk@ue.wroc.pl	B-304a
Instructors	Anna Mempel-Śnieżyk	anna.sniezyk@ue.wroc.pl	B-304a

Description of the course	<p>The course provides the basic tools of company development and focuses on tools and technics improving business activities.</p> <p>After attending this lecture, a student should be able to discuss different conditions and risks facing companies.</p> <p>PEST and competitive analysis will be used (classes) to identify an international condition and environment.</p> <p>The last part of the course concentrates on the pro-business features of the owners, their skills and knowledge (in detail on communication and negotiation, the role of verbal and nonverbal communication).</p>
Prerequisites	Basic economic knowledge, teamwork

Goals	The course aims to explain and practice the practical aspect of business development (referring, among others, to the environment, competitors, stakeholders, business supporting institutions, and communication)
Knowledge	<ol style="list-style-type: none"> 1. Transfer of knowledge about the entrepreneurship support system, barriers, and associated problems. 2. Possible ways of problem-solving. 3. Transfer of knowledge about the business environment sector and its role in the present economy.
Skills	<ol style="list-style-type: none"> 1. Students identify the core problem in a company (with the Why 5 method, problem analysis), 2. Students identify target groups, know stakeholder analysis, PEST and SWOT analysis, competition analysis, 3. Students use the offer of business-supporting institutions to define the institutions and the scope of their activities.
Social competencies	<ol style="list-style-type: none"> 1. Students recognise risks that affect the present functioning of the economy. 2. Students can recognise the opportunities and benefits of pro-entrepreneurial and pro-innovative activities. 3. Students can use instruments available to support the business sector

Topics – classes	<ol style="list-style-type: none"> 1. Presenting economy – features, trends, phenomena, and determinants of development. 2. Economic development at regional and local levels. System of supporting entrepreneurship in Poland and selected European Union countries. Examples and discussion. 3. Innovativeness of economy and business sector. Role of innovations for the competitiveness of businesses. How to compete? 4. Business environment and PEST analysis 5. Stakeholder analysis – who are the key players? 6. Competition. Cooperation. Coopetition. 7. Competition analysis - company's examples and seek opportunities - generating ideas 8. Role of cooperation between the business sector and business environment institutions. Examples include incubators of entrepreneurship, centres and technology parks, business support centres, centres for promoting entrepreneurship, local development agencies, and loan and guarantee funds. 9. Examples of network cooperation (Hungary, Italy, Poland, Nederland, etc.) Analysis of clusters examples - generating ideas. 10. Role of the owner (good manager features)
------------------	---

	11. How to talk with partners and employees - business communication – what does it mean positive, aggressive, and assertive communication 12. Negotiations - how to negotiate if you are not a negotiator
Topics – projects	Students describe the background, choose a company, analyse competitors and stakeholders, and prepare the project to improve the company's situation (new customers, new offers etc.)

	Control work	Individual projects	Group projects	Activity in class

Course syllabus	CREATIVE ECONOMY		
ECTS	4 ECTS	Level	Bachelor
Winter term	Online	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

	Name	Email	Room
Author of the syllabus	Katarzyna Miszczak	katarzyna.miszczak@ue.wroc.pl	B-301
Instructors	Katarzyna Miszczak	katarzyna.miszczak@ue.wroc.pl	B-301

Description of the course	The course includes basic knowledge of multidimensional and multidirectional trends in the creative economy. It allows one to know and understand terms, concepts and methods of analysing contemporary phenomena and processes occurring in creative entities worldwide. The course covers empirical reflection on creativity, measurement, possible drivers and bottlenecks.
Prerequisites	Basics of economics

Goals	<ol style="list-style-type: none"> To acquaint students with particular modern concepts of a creative economy. To transfer knowledge regarding basic terms, classifications, functions, features and dimensions of phenomena and processes occurring in creative units.
Knowledge	Students gain a new perspective on the creative economy and discover how culture and business can collaborate.
Skills	Students are able to pave a career path in creative professions.
Social competencies	Students engage in a collaborative learning environment where participation and hands-on learning are fundamental.

Topics – classes	<ol style="list-style-type: none"> What is Creativity? Innovation as a global economic driver Creative industries and cultural industries in an economy The unique role of arts in the development of social and economic capital The three-sector model of creative activity Measurement of creativity and innovativeness The intersection of arts and business – the complexities and opportunities Concepts of the “creative class” and creative cities and creative clusters – and how they apply to companies, governments and citizens alike Learning region as a creative milieu of smart cities – the need for multiple strategies Mapping creative communities to forging new pathways for intelligent development
Topics – projects	<ol style="list-style-type: none"> Creative Strategy (individual project) Networking in creative and cultural industries (team game-group project)

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	60%	30%	10%

Course syllabus	CURRENT ASSETS MANAGEMENT: VALUE-BASED WORKING CAPITAL DECISIONS		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	30 h	0 h	0 h

Name	Email	Room	
Author of the syllabus	Grzegorz Michalski	grzegorz.michalski@ue.wroc.pl	B-210
Instructors	Grzegorz Michalski	grzegorz.michalski@ue.wroc.pl	B-210

Description of the course	<ol style="list-style-type: none"> Working Capital Management in the Business Context. Objectives and nature of enterprises in the context of their risk sensitivity. Relationships between the goals of enterprises and the characteristic features of their businesses. Understanding and Measuring Financial Liquidity Levels. Definition of financial liquidity and liquidity-level measurements. The specific role of short-term financial decisions, a classification of definitions of financial liquidity, sources of information about liquidity level, and liquidity-level measurements. Intrinsic and External Values of Liquidity and Optimization. Relationship between firm value and business risk sensitivity. Net Working Capital Management Strategies. Value-maximizing optimal level of inventory (VBEOQ model). Modification of the POQ model: VBPOQ. Conclusions and remarks. Current assets management should use policies and techniques to create firm value.
Prerequisites	None

Goals	<ol style="list-style-type: none"> The ability to decide which current assets management strategy is the best in the context of firm value creation. Ability to understand the spirit of financial management perspective during current assets management.
Knowledge	<ol style="list-style-type: none"> After the course, students should know how to use financial management philosophy during current assets management-oriented firm value creation. Know arguments that businesses exposed to greater risk need a different approach to managing liquidity levels.
Skills	<ol style="list-style-type: none"> Building for-profit finance issues into capacity and sustainability in a one-time frame short but with the understanding of its long-term consequences. Possibly recognize motives and criteria for decision-making by entrepreneurs to protect the financial security of their businesses and manage financial liquidity.
Social competencies	<ol style="list-style-type: none"> Possibility to link current assets management with an oriented value creation perspective. After the Value-Based Working Capital Management course, the student should be able to analyze the causes and effects of improper cash flow management between entrepreneurial organizations with varying levels of risk.

Topics – classes	<ol style="list-style-type: none"> The basic philosophy of Current Assets Management and Value-Based Working Capital Management. Value-based determinants of Working Capital and characteristics of Working Capital Management Strategies. Case study: Value-based determinants of Working Capital and characteristics of Working Capital Management Strategies. Working Capital Measures and Metrics and Impact of Working Capital Management on Firm Profitability and Performance. Case study: Working Capital Measures and Metrics and Impact of Working Capital Management on Firm Profitability and Performance. Value-Based Cash Management: Cash Management and Models. Case study: Value-Based Cash Management: Cash Management and Models. Value-based Cash Forecasting and Investing Surplus Cash and Short-Term Borrowing. Case study: Value-based Cash Forecasting and Investing Surplus Cash and Short-Term Borrowing.
------------------	---

	10. Value-based Accounts Receivable Management. 11. Case study: Value-based Accounts Receivable Management. 12. Value-based Inventory Management.
Topics – projects	1. Value-based determinants of Working Capital and characteristics of Working Capital Management Strategies. 2. Value-Based Cash Management: Cash Management and Models. 3. Value-based Cash Forecasting and Investing Surplus Cash and Short-Term Borrowing. 4. Value-based Accounts Receivable Management. 5. Value-based Inventory Management.

ECTS	4 ECTS	Level	Master
Winter term	Hybrid	Summer term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	0 h	15 h

	Name	Email	Room
Author of the syllabus	Marta Dziechciarz-Duda	marta.dziechciarz-duda@ue.wroc.pl	Z-616
Instructors	Marta Dziechciarz-Duda	marta.dziechciarz-duda@ue.wroc.pl	Z-616
	Józef Dziechciarz	jozef.dziechciarz@ue.wroc.pl	Z-617

Description of the course	Students will learn the methods of practical problems of estimating time series regression models with the most common problem, i.e. the techniques of dealing with autocorrelation and non-stationarity. Students will learn how to detect autocorrelation and non-stationarity. The empirical use of such techniques includes the methods of ARIMA and ARCH. The main area of empirical application of time series modelling covers econometric methods for assessing and predicting financial phenomena (real data examples and case studies).
Prerequisites	Mathematics, statistics

Goals	<ol style="list-style-type: none"> 1. Ability to carry out empirical, socioeconomic time series with the practical analysis of real-life financial time series. 2. Ability to specify and apply simple and multiple time series regression models, ARIMA and ARCH models.
Knowledge	Students know the methods of estimation of simple and multiple time series regression models, the techniques of autocorrelation and non-stationarity detection and the methods of ARIMA and ARCH models. Students know the methods of concluding time series models.
Skills	Students are able to construct a simple and multivariate time series regression model, ARIMA model and ARCH model. Students have the skills to choose appropriate estimation methods of simple and multiple time series regression models. Students can use model estimation results (produced by himself/herself or someone else) to draw conclusions and formulate decisions and recommendations regarding given financial problems.
Social competencies	<ol style="list-style-type: none"> 1. Students have the competence of an abstract understanding of the relationships and interdependencies between financial variables and their development in time. 2. Students can discuss econometric methods for assessing and predicting financial phenomena.

Topics – classes	<ol style="list-style-type: none"> 1. Introduction to stochastic processes and time series models. Static models and models with lags. 2. Ordinary Least Squares (OLS) method: introduction and assumptions. Simple time-series regression: estimation and interpretation. Time trends. Sharpe single-index model. 3. Multiple time series regression: introduction, estimation, interpretation of parameter estimates, properties of the OLS estimators. 4. Autocorrelation of error term: introduction, consequences, detection. 5. Stationary and non-stationary stochastic processes. Spurious regression. Integration. Unit root test. 6. ARMA and ARIMA models: introduction, estimation, interpretation. 7. ARCH and GARCH models: introduction, estimation, interpretation
Topics – projects	Empirical analysis of time series: estimation of simple and multiple time series regression models, autocorrelation and non-stationarity detection or the methods of ARIMA and ARCH models based on real-life capital market data or simulated data.

Course syllabus	ECONOMIC AND POLITICAL INTEGRATION IN EUROPE		
ECTS	4 ECTS	Level	Bachelor
Winter term	Not in offer	Summer term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

	Name	Email	Room
Author of the syllabus	Łukasz Olipra	lukasz.olipra@ue.wroc.pl	B-103
Instructors	Łukasz Olipra	lukasz.olipra@ue.wroc.pl	B-103

Description of the course	The course aims to acquaint students with the functioning, basic rules, principles, policies, and history of the European Union. After this course, students should be able to answer the questions: what is European Union? How and why it was created? What is the responsibility of particular EU institutions? And the last, most general question: how does the European Union work? After this course, students should understand the current activities and policies of the European Union and its influence on the national economies, companies and international business.
Prerequisites	Basic knowledge of economics (micro and macroeconomics) and international relations.

Goals	<ol style="list-style-type: none"> The transfer of knowledge concerning the idea of economic integration and its practical example, which is the European integration process and the functioning of the European Union, its institutions, decision-making process, Single European Market, and other EU Policies. The creation of an aware EU citizen with an active and professional attitude to the activity on the Single European Market, skills and abilities to analyse driving forces and effects of the European integration, as well as to identify and use advantages resulting from the integration process for companies and individuals.
Knowledge	<ol style="list-style-type: none"> After this course, students know the basic and advanced terminology, ideas and concepts concerning both: the theoretical framework of economic integration and the process of European integration, including the functioning and responsibilities of EU institutions, the decision making process in the EU, functioning of the Single European Market and other EU Policies. Students know the driving forces and effects of the European integration process, as well as methods and instruments to identify and use advantages resulting from the integration process for companies and individuals.
Skills	<ol style="list-style-type: none"> Students properly use the basic and advanced terminology, ideas and concepts concerning both: the theoretical framework of economic integration and the process of European integration, including the functioning and responsibilities of EU institutions, the decision-making process in the EU, functioning of the Single European Market and other EU Policies. Students are able to participate professionally and are active on the Single European Market, are able to use skills and abilities to analyse driving forces and effects of the European integration, as well as to identify and use advantages resulting from the integration process for companies and individuals. Graduate is also able to interpret basic problems and processes of the contemporary world economy, their causes and course know how to use the basic theoretical knowledge to analyse specific phenomena and processes in the European integration.
Social competencies	<ol style="list-style-type: none"> Students are able to work independently and in a team (also internationally), including taking different roles in a team; students willingly accept responsibility for tasks entrusted to them; possess basic organizational skills and are able to complement and improve their knowledge and skills, being aware of the existence of multiculturalism and diversity of standards in different social systems, and particularly in the European Union and its Members. Students are able to participate effectively in the making and execution of group projects concerning the functioning of contemporary enterprises and the economy in a context of increasing internationalization and the development of integration processes, with particular emphasis on the Single European Market. Students correctly identify socio-economic problems related to the functioning of a market economy and the Single European Market

Topics – classes	<ol style="list-style-type: none"> 1. Origins and history of the European integration process. 2. Theories and concepts of European integration (political and economic), stages of economic integration. 3. Development of the European Communities and European Union – analysis of European treaties. 4. Institutional structure and decision making processes in the EU. 5. Groups of interests in the EU. 6. Creation and basis of the Single European Market. 7. The Common Agricultural Policy. 8. Regional Policy of the European Union. 9. Economic and Monetary Union. 10. Finances of the European Union: budget, revenues and expenditures, the evolution of the budget, financial perspectives. 11. Environmental and Climate Changes Policy in the European Union. 12. The EU's Foreign, Security, and Defence Policies; European Union External Relations. 13. Justice and home affairs. 14. Enlargement: yes or no? How? – Debate.
Topics – projects	<ol style="list-style-type: none"> 1. Formulation of the strategy for an international company aimed at transferring expertise to the EU institutions during the legislation process and lobbying for solutions advantageous for that company. 2. Creation of the Regional Operational Program for a selected underdeveloped EU region to use EU funds to facilitate that region's development.

Course syllabus	ECONOMIC GLOBALIZATION AND THE CURSE OF BLACK SWAN		
ECTS	2 ECTS	Level	Bachelor
Winter term	Online	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
15 h	15 h	0 h	0 h

	Name	Email	Room
Author of the syllabus	Sebastian Bobowski	sebastian.bobowski@ue.wroc.pl	B-121
Instructors	Sebastian Bobowski	sebastian.bobowski@ue.wroc.pl	B-121

Description of the course	The course is intended to familiarize students with theoretical and empirical studies on the globalization of the 21 st century, determinants and implications of major shocks experienced by the world economy, recognized as black swan events. The course includes case studies to address current phenomena and trends.
Prerequisites	Basic principles of microeconomics, macroeconomics

Goals	<ol style="list-style-type: none"> 1. The course is intended to familiarize students with key characteristics of economic globalization, its triggers and challenges. 2. The course is intended to develop the skills required to analyse the determinants and impacts of black swan events taking place in international trade and international finance. 3. The course is intended to shape an open, creative attitude on various aspects of economic shocks in the world economy of the 21st century.
Knowledge	<ol style="list-style-type: none"> 1. Students define the basic characteristics of globalization in the 21st century, its main actors and trends. 2. Students characterize the concept of the black swan and its economic context.
Skills	<ol style="list-style-type: none"> 1. Student anticipates the consequences of black swan events for selected regions, countries and sectors. 2. Students discuss various aspects of crisis management in the face of global shocks, including supranational coordination of responses and its effects.
Social competencies	<ol style="list-style-type: none"> 1. Students are aware of the complexity of the international economic environment. 2. Students are credible and creative members of working groups challenging international economic issues.

Topics – classes	<ol style="list-style-type: none"> 1. Globalization of the 21st century, slowbalization, deglobalization - explaining the conceptual intricacies. 2. The concept of the black swan – seeking for case studies. 3. Global economy and the mystery of missing deficits. 4. Capital paradoxes. 5. Disproving the myth of “too big to fail”. 6. Chinese cough, global flu. 7. Offshoring vs reshoring in the global value chains.
Topics – projects	Global vs regional coordination of responses in the face of black swan events.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	40%	0%	40%	20%

30 h	15 h	15 h	0 h

Name	Email	Room
Author of the syllabus	Jerzy Ładysz jerzy.ladysz@ue.wroc.pl	H-7 (Jelenia Góra)
Instructors	Jerzy Ładysz jerzy.ladysz@ue.wroc.pl	H-7 (Jelenia Góra)

Description of the course	<p>This course introduces the main economic aspects of international economic integration from the point of view of national states and enterprises. The most attention is concentrated on the European Union as a case study. Covering the process of European integration and its economic impacts on individuals, firms, regions and member states, students analyse the economic costs and benefits generated by EU integration.</p> <p>This course is delivered as a combination of lectures, class discussions and readings. Due to the highly topical nature of the course, students are expected to engage with the material provided in class to contribute meaningfully to class discussions.</p>
Prerequisites	Basic knowledge of macroeconomics and microeconomics. Elementary statistics and mathematics are also desirable.

Goals	While the course focuses on economic analysis, it will allow students to broaden their understanding of theoretical aspects of the international integration processes, its costs and benefits for individuals, enterprises, regions and member states.
Knowledge	Theories of international economic integration and the policy areas it occurs in.
Skills	Students assess business opportunities and threats flowing from international integration and the nature of corporate strategic responses to European integration.
Social competencies	Students analyse, draw conclusions, and discuss topics related to European economic integration using economic and strategic management theories.

Topics – classes	<ol style="list-style-type: none"> 1. International economic integration, its benefits, costs, and relationship with multilateral trade opening. Integration stages and tools. Impact of economic integration on economic growth, labour market, competitiveness. 2. Business strategies, opportunities and risks in the context of European integration and its external dimension. Strategic management models. Example of the retailing sector. 3. Competition. Market integration. Labour migration. Persistent distance decay effects in international trade. 4. Regional and urban policy. Spatial effects of economic integration. Regional and global concentration, dispersal of economic activity. Clusters. Spatial income disparities. Economic, social and territorial cohesion. European Neighbourhood Policy and Cross-Border Cooperation. 5. Taxation and customs union. Tax competition and harmonization of corporate tax rates in Europe. 6. European financial integration. Common budget. 7. Monetary integration. The case of the Eurozone. Asymmetric shocks. 8. Transnational corporations. Foreign direct investment. International mergers and acquisitions.
Topics – projects	<ol style="list-style-type: none"> 1. Costs and benefits of the European Union cohesion policy for the Italian economy (and different variants of such topic). 2. Impact of euro as a common currency, on the foreign direct investment in Eurozone (and different variants of such topic). 3. Impact of Spain's membership in the EU on the activity of transnational corporations in Spain (and different variants of such topic). 4. Costs and benefits of labour market integration in the EU for Germany (and different variants of such topic).

Description of the course	The course aims to develop an understanding of emerging and transitional economies, the economic performance, prospects and problems of these economies. Upon successful completion, a student should demonstrate the skills to carry out assessments of enterprises and countries in transition. Students should also understand the relationships between development, policies and globalisation.
Prerequisites	Understanding of basic economic rules

Goals	Explaining business opportunities and threats in emerging economies
Knowledge	Providing knowledge regarding the relevance of emerging economies
Skills	<ol style="list-style-type: none"> Understanding the role and implications of the development of emerging economies in the global economy. Analysing business environment concerning macroeconomic, microeconomic, industry and firm-level data.

Description of the course	The course is intended to familiarize students with theoretical and empirical studies on global sourcing by multinational enterprises (MNEs), its determinants and its impacts on the economy. The course includes case studies to address current phenomena and trends.
Prerequisites	Basic principles of microeconomics, macroeconomics and international business

Goals	<ol style="list-style-type: none"> The course is intended to familiarize students with key phenomena related to global sourcing by MNEs with theoretical and empirical contexts. The course is intended to develop skills required to analyse determinants and impacts of MNEs' decision making processes when considering sourcing of inputs globally. The course is intended to shape an open attitude on issues related to the social and environmental aspects of MNEs' activities while recognizing the importance of the qualitative dimension of globalization processes in the 21st century.
Knowledge	<ol style="list-style-type: none"> Students define basic categories of inputs sourced globally by MNEs and their strategic importance in business activities. Students characterize basic strategies of global sourcing and investor profiles. Students identify the location advantages of selected countries and regions.
Skills	<ol style="list-style-type: none"> Students analyse decision-making processes by MNEs regarding the global sourcing of inputs. Students formulate recommendations and conclusions regarding the social and environmental impacts of MNEs' activities when sourcing globally.
Social competencies	<ol style="list-style-type: none"> Students are aware of the complexity of the international business environment. Students appreciate the importance of human and knowledge resources in global sourcing by MNEs.

Topics – classes	<ol style="list-style-type: none"> Globalization vs deglobalization and global sourcing. Global sourcing: a theoretical perspective. Inputs and their allocation. Inputs in the MNEs' strategies. Location determinants of foreign direct investments (FDI). Human capital and knowledge as location determinants. International financial system and global sourcing.
Topics – projects	<ol style="list-style-type: none"> Corporate social responsibility and global sourcing. Clustering and networking and global sourcing.

Instructors	Aleksandra Kuźmińska-Haberla aleksandra.kuzminska-haberla@ue.wroc.pl	B-302a

Description of the course	The module is designed to sensitize students to the nature of marketing communication on international markets and the factors that managers must consider when deciding whether to adopt or standardize marketing messages. After attending this lecture, a student should be able to discuss different elements of culture in the international context, and should see how cultural diversity, different values, attitudes, and preferences may influence the necessity to adjust marketing communication activities in particular markets.
Prerequisites	Basic marketing knowledge.

Goals	<ol style="list-style-type: none"> To provide knowledge about the nature of marketing communication in international markets. To provide knowledge about a substance of culture and its importance in marketing communication in an international environment. To provide knowledge of elements of culture that have the biggest influence on intercultural marketing communication.
Knowledge	A student understands the concept of culture, its main elements, and its influence on marketing communication activities and strategies.
Skills	A student can evaluate promotional strategies in the context of cultural differences and is able to propose appropriate solutions.
Social competencies	A student is ready to prepare a marketing communication strategy for international markets taking into account cultural differences.

Topics – classes	<ol style="list-style-type: none"> The concept of marketing communication. Standardization vs adaptation. The conception of culture. Elements of culture in marketing communication (religion, values, traditions and customs, attitudes, aesthetics, symbolism). Communication issues. Transcreation in advertising. Political correctness in advertising across cultures. Breaking cultural taboos by companies. New media in an intercultural context. Marketing failures due to disregard for cultural differences.
Topics – projects	<ol style="list-style-type: none"> Advertising style in a selected country. An image of a family, men, and women in marketing communication across cultures.

Course syllabus	INTERNATIONAL COMPARATIVE ECONOMICS		
ECTS	4 ECTS	Level	Bachelor
Winter term	Hybrid	Summer term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

	Name	Email	Room
Author of the syllabus	Łukasz Olipra	lukasz.olipra@ue.wroc.pl	B-103
Instructors	Łukasz Olipra	lukasz.olipra@ue.wroc.pl	B-103

Description of the course	This course is devoted to the broad and interesting topic of international comparative studies. Before moving to the international level, it is necessary first to understand the concept of an economic system, factors shaping and influencing economic systems, as well as categorization of economic systems according to different criteria. International comparative studies analyse and compare, in fact, the economic systems of countries or their parts. In the next step, methods and approaches to creating international comparative studies will be presented, mainly based on the example of existing rankings of countries prepared by various international organizations. Students will be asked and encouraged to prepare their own comparative study for selected countries based on chosen criteria during the course.
Prerequisites	Basic knowledge in economics and general knowledge about international diversity in the economic and social development of countries

Goals	<ol style="list-style-type: none"> To make students aware of the economic system concept and varieties of types of economic systems across the world as well as methods of comparing different economic systems and the existence of various international comparative studies. To make students able to prepare their own international comparative analysis based on different criteria and for various purposes.
Knowledge	<ol style="list-style-type: none"> Students will gain knowledge about the concept of an economic system, factors shaping economic systems, categorization of economic systems according to different criteria and varieties of capitalism. Students will also analyze different countries as examples of particular types of economic systems. Students will learn about the basics of international comparative economics and methods of international comparative studies of countries and economic systems. Students will gain knowledge about international rankings, ratings, organizations preparing such rankings and sources of data.
Skills	<ol style="list-style-type: none"> After this course, students are able to compare countries independently according to criteria specified by themselves. After this course, students are able to search for comparable data in the international databases, distinguish types of economic systems across the world and compare them on the base of ranking presented during the lecture. After this course, students can prepare a comparative analysis for the company's decision on the possible direction of their international expansion and foreign investment.
Social competencies	<ol style="list-style-type: none"> Students gain competencies in teamwork (final projects are prepared in teams) and intercultural communication. Students gain competencies in presenting to the audience results of their work in a foreign language using the presentation in ppt (or corresponding program).

Topics – classes	<ol style="list-style-type: none"> Foundation of the international comparative economics. Basis of the institutional economics: the concept of institution, varieties and factors influencing institutions. The state's economic system – theories, general information, types, varieties, and factors that influence and shape economic systems in a contemporary world. The problem of inequalities in the contemporary world. Examples of different economic systems in a contemporary world – case studies of Germany, France, Sweden, UK, USA, China, Russia, transition countries: Poland, Hungary, and other selected examples, particularly emerging economies.
------------------	--

	<ol style="list-style-type: none"> 6. Methodology and methods of international economic assessment, comparisons and rankings. 7. Examples of the international rankings and ratings (structure, content and methodology of rankings): World Competitiveness Yearbook of IMD, Global Competitiveness Report of World Economic Forum, Index of Economic Freedom (Global Economic Freedom), Corruption Perception Index (CPI), Human Development Index (HDI), Ease of Doing Business Index (of World Bank), Foreign Direct Investment Index (FDII) and other examples if necessary. 8. Assessment of particular economic systems based on different rankings and criteria. 9. Students' presentations of research projects.
Topics – projects	<ol style="list-style-type: none"> 1. Presentation of the economic system of one selected country. 2. Comparative analysis of selected countries (about 6, 7 countries) based on chosen criteria (students can either choose one of the topics proposed by the lecturer or suggest their idea of comparative analysis; student's idea has to be approved by the lecturer).

Description of the course	<p>Marketplace is an international business simulation game, a sophisticated interactive computer program that mimics the competitive, ever-changing marketplace. The consequences of the students' decisions are quickly reflected in the simulated marketplace. Students learn to adjust their strategies to become stronger competitors. Marketplace Simulation integrates all functional areas of business and enables students to understand how the pieces fit together as a coherent whole. In six decision rounds, teams choose a business strategy, evaluate tactical options, and make a series of decisions regarding marketing, sales, production, human resources management, R&D, and business finance. After each round, the students will see how their decisions affect the performance of others and the entire organization. The game was first set up over 20 years ago as an experiential learning exercise. Today, fully web-based Marketplace simulations are used by thousands of students and managers worldwide. At the moment, you can find it in over 300 business schools and 180 corporations in 35 countries.</p>
Prerequisites	Basics of management

Goals	To understand the idea of strategy creation and implementation in an international context.
Knowledge	<ol style="list-style-type: none"> Simulation of strategy implementation in international settings. Understanding of business management processes.
Skills	<ol style="list-style-type: none"> Ability to discuss strategy creation applied in an international context. Ability to prepare a business plan. Ability to carry out market research and market analysis.
Social competencies	<ol style="list-style-type: none"> Teamworking. Effective communication.

Topics – classes	<ol style="list-style-type: none"> Company set up, mission statement and goals, market strategy. Brand design and brand management. Marketing mix. Strategic analysis of the customer needs and competitors in the international markets. International expansion of the business. HRM – compensation, salaries and motivational strategy. Production management – greenfield development, inventory control, production scheduling. Sales development in the global market. E-commerce. Strategy implementation. Business plan preparation and presentation.
Topics – projects	Business plan presentation.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	40%	0%	40%	20%

Literature	<ol style="list-style-type: none"> <i>Marketplace Students' Manual.</i> Henry A. (2018), <i>Understanding Strategic Management</i>, Oxford University Press.

Description of the course	Leadership in business is the area of knowledge essential in managerial activity in different types of organizations worldwide. The subject is realized in the form of interactive lectures and workshops (Teaching methods - Discussion (e.g. Socratic Method), case studies, teamwork and simulations). The concepts and theoretical models were chosen based on their usefulness to the realized simulations and analyzed case studies. The combination of leadership and international context is not accidental. It is important to know how to use the different methods and techniques of influence in chosen place and time.
Prerequisites	Basic knowledge of management

Goals	<ol style="list-style-type: none"> To familiarize the students with basic knowledge of leadership. Learning and attempting to apply methods of impact on people useful in the present organizational reality.
Knowledge	Knowledge of leadership in business – the best solution in different cultural, social, economic and organizational contexts.
Skills	The ways to create the leader-subordinates relationship based on mutual trust also in the global scope.
Social competencies	Efficiency and effectiveness of the leadership in different cultures.

Topics – classes	<ol style="list-style-type: none"> Organizations in a competitive market environment. The sources of leadership. Different approaches to leadership. Situational leadership. Heritability of leadership and learning leadership. Expectations towards global leaders. Global trends in leadership.
Topics – projects	Future leadership simulation in teams.

Course syllabus	LOGISTICS AND SUPPLY CHAIN MANAGEMENT		
ECTS	4 ECTS	Level	Master
Winter term	Hybrid	Spring term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

Name	Email	Room
Author of the syllabus	Łukasz Olipra lukasz.olipra@ue.wroc.pl	B-103
Instructors	Łukasz Olipra lukasz.olipra@ue.wroc.pl	B-103

Description of the course	Logistics increases the potential for competition, customer satisfaction, through coordination and integration of physical, financial and information flows within the whole supply chain. The course familiarizes students with concepts of logistics and Supply Chain Management, key logistic activities, logistic subsystems and the role of logistics both: in companies as well as in their international operations and business. The concept of SCM will be explained and some basic tools and methods used for logistic operations analysis, improvements of efficiency within the supply chain and optimization. The course includes presentation of principles and theoretical framework of logistics and SC and the use of case studies to present more practical side of topic.
Prerequisites	Basic knowledge in economics and management

Goals	<ol style="list-style-type: none"> To acquaint student with concepts of logistics and supply chain management and key activities within them. To make students able to identify and analyse functions of logistics and SCM as well as responsibilities of logistic managers and international logistic systems participants. To transfer the knowledge and skills used in planning and organizing logistic operations in companies as well as management of the global supply chain.
Knowledge	<ol style="list-style-type: none"> After this course student knows the concept of logistics and supply chain management, its functions, role in international companies, international trade and global economy. After this course student has knowledge regarding different divisions of logistics into subsystems, logistic activities, characteristics of logistic systems' participants as well as interrelations between them. After this course student has knowledge regarding the concepts of supply chain management, its functioning and interrelations between participants of supply chains.
Skills	<ol style="list-style-type: none"> After this course student is able to analyse functions and role of logistics in particular international companies, in international trade and global economy. After this course student is able to identify and analyse different logistic subsystems, logistic activities, as well as interrelations between them. After this course student is able to identify the benefits, costs and risks of the planned logistics operations and of the use of particular concepts and instruments in managing supply chains.
Social competencies	<ol style="list-style-type: none"> After this course student has the ability to work independently, to prepare and present their ideas and discuss proposed solutions as well as to solve problems from the scope of the international logistics. After this course student has the ability to work in a team, where one remains open to the ideas of other team members, discuss and participate in the development of a common position, which can then be presented to the public forum. After this course student has the ability to work in an international environment and cooperate with people from different countries and cultures.

Topics – classes	<ol style="list-style-type: none"> Introduction to logistics and supply chain management: basic concept and definitions, origins, evolution and developments. Role and function of logistics and supply chain management in contemporary companies and in the global economy. Sourcing and inventory planning and management. Warehousing and production logistics. Transportation systems. Distribution management within supply chains.
------------------	---

	<ol style="list-style-type: none"> 7. Basic instruments and tools in logistics (just in time, kanban, methods of stock management, QR, ECR, etc.) 8. Integrating and managing business processes across the supply chain. 9. Strategic lead time management in supply chains 10. New technologies in support of logistics (EDI, MRP and ERP, RFID, Telematics etc.) and new trends in logistics (automation, robotization and digitalization). 11. Consequences of the COVID-19 pandemic for logistics and supply chain management.
Topics – projects	<ol style="list-style-type: none"> 1. Purchasing logistics: “Make or buy” dilemma and requirements towards possible suppliers. 2. SCM Issues: Managing long lead times and irrational behaviour of customers in the era of shortages – a case study. 3. SCM Issues: Preparing a Fast-growing Fashion Network for the Challenges of the Globalized World – a case study. 4. Selected problems within Supply Chain Management based on case studies

Course syllabus	MANAGEMENT ACCOUNTING IN FINANCIAL INSTITUTIONS		
ECTS	4 ECTS	Level	Master
Winter term	In-class	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

Name	Email	Room
Author of the syllabus	Magdalena Chmielowiec-Lewczuk magdalena.chmielowiec-lewczuk@ue.wroc.pl	Z-405
Instructors	Magdalena Chmielowiec-Lewczuk magdalena.chmielowiec-lewczuk@ue.wroc.pl	Z-405

Description of the course	The subject provides the opportunity to acquire knowledge and practical skills to implement management accounting instruments in financial institutions. These instruments must be adapted to the conditions of the specific activities of banks, insurance companies, and investment or pension funds, and the results obtained must make it possible to solve problems concerning the management of these institutions and financial products.
Prerequisites	Accounting, Finance

Goals	To provide knowledge and practical skills in the application of management accounting instruments in financial institutions
Knowledge	<ol style="list-style-type: none"> 1. Students understand and know the need to implement management accounting in financial institutions 2. Students know how to adapt management accounting instruments to the needs of financial institutions 3. Students know management accounting instruments that can be implemented in financial institutions.
Skills	<ol style="list-style-type: none"> 1. Students can prepare calculations for the purpose of management accounting in financial institutions 2. Students can adapt accounting instruments to solve management problems in financial institutions 3. Students can design management accounting systems in financial institutions.
Social competencies	<ol style="list-style-type: none"> 1. Students can work, discuss, and search for solutions in a group 2. Students can prepare a project and present results.

Topics – classes	<ol style="list-style-type: none"> 1. Accounting system in financial institutions (banks, insurance companies, pension funds, investments funds) (2h) 2. The range of management accounting in financial institutions (2h) 3. Cost accounting system and financial product costing calculation (2h) 4. Variable costing in making decisions process in financial institutions (2h) 5. Activity-based costing in financial institutions (2h) 6. Life cycle costing in financial institutions (2h) 7. Kaizen costing and target costing in financial institutions (2h) 8. Decisions accounting in financial institutions (4h) 9. Cost management process in financial institutions (2h) 10. Budgeting and responsibility accounting in financial institutions (4h) 11. Pricing decisions, sale analysis and profitability analysis of financial products (2h) 12. Strategic management accounting in financial institutions (4h)
Topics – projects	<ol style="list-style-type: none"> 1. Financial institutions market in the EU 2. Accounting system in bank and insurance companies – similarities and differences 3. The insurance market in your country 4. Banking market in your country 5. Problems with management accounting in financial institutions (bank or insurance company or investment fund or pension fund) 6. Activity-based costing in bank 7. Activity-based costing in an insurance company 8. Banking product life cycle costing 9. Insurance product life cycle costing

	10. Budgeting in financial institution (bank or insurance company or investment fund or pension fund) 11. Responsibility accounting in financial institutions (bank or insurance company or investment fund or pension fund)

Author of the syllabus	Marta Nowak	marta.nowak@ue.wroc.pl	Z-512
Instructors	Marta Nowak	marta.nowak@ue.wroc.pl	Z-512

Description of the course	The course combines marketing management, controlling, and managerial accounting. Its main aim is to look at marketing strategies, tools, and plans, from the point of view of the costs incurred. The most crucial goal of the course is to teach marketing costs budgeting based on the marketing plans. The meetings are conducted interactively and include a lot of group work during the classes and a project and its presentation in international teams.
Prerequisites	Management (fundamentals of management), Accounting (fundamentals of accounting)

Goals	<ol style="list-style-type: none"> 1. Increasing students' awareness about marketing costs as a consequence of applied marketing strategies and tools. 2. Educate how to prepare a marketing budget for a company.
Knowledge	Knowing how different approaches to marketing influence marketing costs.
Skills	<ol style="list-style-type: none"> 1. Constructing marketing plans and budgets. 2. Analysing the content of marketing budgets.
Social competencies	<ol style="list-style-type: none"> 1. Cooperation in preparing marketing strategies, defining marketing tools, doing marketing plans, planning budgets and analysing them, and presenting the budget to a differentiated audience. 2. Diverse teamwork.

Topics – classes	<ol style="list-style-type: none"> 1. Marketing controlling concept. 2. The role of a marketing controller in a company. 3. Marketing costs. 4. Marketing strategies and their influence on costs incurred by a company. 5. Marketing tools and their influence on costs incurred by a company. 6. Accounting and financial statements as a database for marketing controlling. 7. Marketing responsibility centres of a company. 8. Cost budgeting in marketing controlling. 9. Marketing audit. 10. ABC analysis in marketing controlling. 11. Stakeholder analysis in marketing controlling.
Topics – projects	The project includes planning marketing strategy defining stakeholders, defining marketing tools, doing marketing plans, constructing a marketing budget, and analysing marketing costs. The project is done and presented in international groups.

Course syllabus	MARKETS AND STRATEGIES – INDUSTRIAL ORGANIZATION		
ECTS	4 ECTS	Level	Master
Winter term	In-class	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	30 h	0 h	0 h

	Name	Email	Room
Author of the syllabus	Mikołaj Klimczak	mikolaj.klimczak@ue.wroc.pl	B-220
Instructors	Mikołaj Klimczak	mikolaj.klimczak@ue.wroc.pl	B-220

Description of the course	Among economic sciences, the industrial organisation deals with the analysis of imperfectly competitive markets, i.e. markets where a firm has the ability to exercise its market power and set its price above the marginal cost. The main objective of the course is to provide the student with knowledge on the functioning of markets, market analysis and rigorous assessment of business strategies.
Prerequisites	Microeconomics

Goals	<ol style="list-style-type: none"> To convey up-to-date theoretical economic knowledge on the functioning of imperfectly competitive markets. Identify and validate basic skills in qualitative market analysis. To develop an attitude of motivated and critical analysis of markets and business strategies.
Knowledge	<ol style="list-style-type: none"> Students understand the idea of a relevant market. Students are able to provide the framework for market power analysis. Students distinguish various pricing and non-pricing strategies.
Skills	<ol style="list-style-type: none"> Students should be able to apply ad hoc analysis of the relevant market. Students should understand which strategies could be applied under different conditions. Students should study the effects of various strategies of companies.
Social competencies	<ol style="list-style-type: none"> Students should be able to understand the reasoning behind anti-trust cases that question market power. Students should be able to understand the ethical implications of competition.

Topics – classes	<ol style="list-style-type: none"> Economy – sector – industry – market – segment. The relevant market approach to the market analysis. Market power and competitive constraints of strategies. Barriers to entry and exit. Collusion and its consequences for companies, markets, and the economy. Overview of the competitive strategies. Pricing strategies. Pricing strategies to deter entry: limit and predatory pricing. Price discrimination. Non-pricing strategies: product differentiation, advertising and information, research and development, vertical integration. Competition regulation and its impact on the economy.
Topics – projects	Which of the strategies and economic phenomena discussed in the class play an essential role in the activities of the enterprise? Analyse an enterprise of your choice in a specifically defined market, providing your own assessment of the relevant market and the strategies employed by the enterprise using methods of economic analysis.

Description of the course	Motivating people is the area of knowledge essential in the managerial activity in different types of organizations worldwide that are going to compete with their major competitors in chosen segments of the market. The subject is realized in the form of interactive lectures and workshops (Teaching methods - Discussion (e.g. Socratic Method), case studies, teamwork – “The project of Motivational system”). The concepts and theoretical models were chosen based on their usefulness to the realized simulations and analyzed case studies. Motivating People is an important part of an activity in a managerial position.
Prerequisites	Basic knowledge of management

Goals	<ol style="list-style-type: none"> To familiarize the students with basic knowledge of motivation. Learning and attempting to apply methods of impact on people useful in the present organizational reality.
Knowledge	<ol style="list-style-type: none"> Key factors influencing a work motivation system. Tools having short-term and long-term potential for use in various situations in an organization.
Skills	<ol style="list-style-type: none"> Analyzing the needs of employees. Precise criteria in expectations towards employees and information about their successes and mistakes in an organization.
Social competencies	<ol style="list-style-type: none"> Efficiency and effectiveness in motivating employees based on one’s qualifications and expectations of an organization. Clarification in reading social expectations through active communication with employees.

Topics – classes	<ol style="list-style-type: none"> Introduction to the problems of motivation and motivating. The practical application of theory. Motivational role of money. Material tools for motivating people. Compensation system. Nonmaterial tools for motivating people. Motivating people in chosen social and cultural circumstances.

Course syllabus	PERSONAL BRANDING IN MODERN BUSINESS		
ECTS	2 ECTS	Level	Bachelor
Winter term	Hybrid	Summer term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
15 h	0 h	15 h	0 h

Name	Email	Room
Author of the syllabus	Joanna Macalik joanna.macalik@ue.wroc.pl	B-11
Instructors	Joanna Macalik joanna.macalik@ue.wroc.pl	B-11

Description of the course	As part of the course, students will learn the importance of personal branding in modern business and the labour market. They will be introduced to the most important theories and models of personal branding. Students will also learn practical principles of strategic personal branding, including the use of social media for this purpose. The class will include lectures, discussion, analysis of case studies, group work and individual exercises.
Prerequisites	Basic familiarity with the Internet and social media

Goals	<ol style="list-style-type: none"> To equip students with an understanding of the personal branding role in modern business. To introduce students to the most important theories and models of personal branding. To teach students how strategically build and sustain their personal brand.
Knowledge	<ol style="list-style-type: none"> Students understand the role of personal branding in modern business. Students know basic concepts and models of personal branding. Students know the procedure of strategic personal branding and its tools.
Skills	<ol style="list-style-type: none"> Students can independently create and introduce the strategy of personal brand. Students know how to choose and use tools of personal branding. Students are able to choose proper channels of personal brand communication.
Social competencies	<ol style="list-style-type: none"> Students increase awareness of their strengths. Students are able to effectively self-present. Students can receive and understand feedback.

Topics – classes	<ol style="list-style-type: none"> Introduction to the subject. The concept of branding and personal branding. Theories and models on personal brand and its creation. Personal brand versus self-management. Personal brand versus self-marketing. Functions of a personal brand. Personal branding versus labour market and organizational context. Personal branding strategy and tactics (personal branding procedure). Presentation and self-presentation versus personal brand. Personal brand vs personal etiquette: dress code, savoir vivre, body language, voice delivery. Managing the “first impression”. Personal branding tools. Online and offline branding. Personal branding and co-branding. Crisis communication for a personal brand. Ethics in personal branding. Measuring personal brand effectiveness.
Topics – projects	<ol style="list-style-type: none"> Analysis of a chosen personal brand. Preparing the strategy and tactics of personal brand.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	50%	25%	25%

Course syllabus	PLACE MARKETING		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	30 h	0 h	0 h

	Name	Email	Room
Author of the syllabus	Andrzej Raszkowski	andrzej.raszkowski@ue.wroc.pl	A-41 (Jelenia Góra)
Instructors	Andrzej Raszkowski	andrzej.raszkowski@ue.wroc.pl	A-41 (Jelenia Góra)

Description of the course	In this course, you will learn how to make effective place marketing decisions, including assessing place marketing opportunities and developing place marketing strategies and implementation plans. Course topics include market-oriented strategic planning, local tourism products, promotional strategy, advertising campaigns, target market selection, competitive advantages, local government involvement, integrated communications, visual identification system, public relations, social media and sales promotions.
Prerequisites	None

Goals	<ol style="list-style-type: none"> 1. Identify core concepts of place marketing and the role of place marketing in local and regional socio-economic development. 2. Discovering the importance of place marketing in today's world. 3. Understanding place marketing processes.
Knowledge	<ol style="list-style-type: none"> 1. Definitions and basic information about place marketing. 2. Knowledge of place marketing strategies implementation. 3. Importance of cooperation in place marketing processes.
Skills	<ol style="list-style-type: none"> 1. Recognition of basic elements of place marketing. 2. The ability to implement place marketing elements and strategies in practice.
Social competencies	<ol style="list-style-type: none"> 1. Understanding the benefits of effective place marketing processes for society. 2. The ability to consult experts when difficulties arise. 3. Networking improvement.

Topics – classes	<ol style="list-style-type: none"> 1. Place – brand strategy as a plan for defining the most realistic, most competitive, most compelling strategic vision for the country, region or city. 2. The ways the places promote themselves. 3. Branding the city's image. 4. Brand creation for cities and regions. 5. Regions' competitiveness factors. 6. Place marketing success factors. 7. Place identity and place image.
Topics – projects	Place marketing activities based on the example of a selected city, region.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	100%	0%	0%

Course syllabus	PROBABILITY THEORY WITH APPLICATIONS		
ECTS	5 ECTS	Level	Bachelor
Winter term	Hybrid	Summer term	Hybrid

Total hours	Lectures	Tutorials	Computer labs
45 h	30 h	15 h	0 h

	Name	Email	Room
Author of the syllabus	Albert Gardoń	albert.gardon@ue.wroc.pl	Z-605
Instructors	Albert Gardoń	albert.gardon@ue.wroc.pl	Z-605

Description of the course	The course is complementary to "Statistics: Inference and Mathematical Statistics". It concerns the theoretical backgrounds of Probability Theory used in Statistics and lets students understand better the general idea and the sense of statistical methods presented in other quantitative courses. During the course, the modern axiomatic approach to probability is introduced, which is a generalization of the classical case, appropriate for infinite and continuous models. The notion of the random variable and its distribution is presented, which is a basis for the notion of the statistical feature. The crucial Central Limit Theorem is discussed, including its consequences in observed reality and statistical methods.
Prerequisites	Mathematics

Goals	<ol style="list-style-type: none"> 1. Identification of practical phenomena as random events. 2. Learning the mathematical tools for the evaluation of probabilities and other random characteristics.
Knowledge	<ol style="list-style-type: none"> 1. Students identify and describe random phenomena. 2. Students explain the background of the methods applied.
Skills	<ol style="list-style-type: none"> 1. Students recognize a distribution of an observed phenomenon. 2. Students calculate random characteristics of an observed phenomenon.
Social competencies	<ol style="list-style-type: none"> 1. Students are aware that economic phenomena are mostly random. 2. Students are informed that probabilistic methods are applicable in business.

Topics – classes	<ol style="list-style-type: none"> 1. Probability space, events as sets, axiomatic definition of probability. 2. Conditional probability, independence of events. 3. Random variables and their characteristics. 4. Random vectors, independence of random variables. 5. Correlation and the 1-st kind regression. 6. Basic discrete distributions. 7. Basic continuous distributions. 8. Central Limit Theorem.
Topics – projects	None

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	50%	0%	0%	50%

Literature	<ol style="list-style-type: none"> 1. Pitman J. (1993), <i>Probability</i>, Springer. 2. McClave J.T., Benson P.G. (1985), <i>Statistics for Business and Economics</i>, Dellen. 3. Lupton R. (1993), <i>Statistics in Theory and Practice</i>. Princeton.

Course syllabus	PUBLIC SECTOR ECONOMICS		
ECTS	2 ECTS	Level	Bachelor
Winter term	In-class	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
15 h	15 h	0 h	0 h

	Name	Email	Room
Author of the syllabus	Marcin Brol	marcin.brol@ue.wroc.pl	B-202
Instructors	Marcin Brol	marcin.brol@ue.wroc.pl	B-202

Description of the course	The role and importance of the state in the economic process have evolved over the centuries due to technological progress, the development of social thought, and democratisation. Traditionally, it was supposed to be a guardian of compliance with the free market rules. The perception of what can be described as "public" has recently changed. The scope of tasks of the public entities includes public safety, social welfare, education, health protection, technical infrastructure, and many other activities, mainly regulatory. The subject of "Public Sector Economics" is to present issues related to the functioning of the state, its imperfections, the failure of the market mechanism, as well as to explain the concepts of public goods, public regulation, and public choice decentralisation, privatisation and commercialisation. Classes require the active participation of students in the discussion.
Prerequisites	Microeconomics

Goals	Understanding the role of government and local government in the modern economy.
Knowledge	Knowing the basics of public sector economics.
Skills	Ability to analyse public sector entities.
Social competencies	Ability to evaluate and discuss the role of the state in the economy.

Topics – classes	<ol style="list-style-type: none"> 1. The subject range of the public sector. 2. Theory of public goods. 3. Public sector failures. Bureaucracy. Corruption. Dealing with public money. Risk aversion. Budget limitations. 4. Public administration. Private and public sector management – key differences. 5. Market failures. 6. Market regulations. 7. Public choice theory.
Topics – projects	<ol style="list-style-type: none"> 1. The purpose of public regulations. 2. Methods of cooperation between private and public sectors. 3. The sources of corruption. 4. Decision-making process in the public sector. 5. The role of the local governments. 6. Objectives of public aid. 7. The reasons for privatisation. 8. The role of the public sector in creating a knowledge-based economy.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	50%	0%	40%	10%

Course syllabus	SOCIAL INNOVATIONS		
ECTS	4 ECTS	Level	Master
Winter term	Online	Summer term	Online

Total hours	Lectures	Tutorials	Computer labs
30 h	15 h	15 h	0 h

	Name	Email	Room
Author of the syllabus	Katarzyna Miszczak	katarzyna.miszczak@ue.wroc.pl	B-301
Instructors	Katarzyna Miszczak	katarzyna.miszczak@ue.wroc.pl	B-301

Description of the course	The course includes complex knowledge of social innovativeness in various aspects. It allows students to know and understand terms, concepts and methods of analysing multidimensional phenomena and processes determining social innovations. The course includes a mixture (and explicit comparisons of) both theoretical and empirical research.
Prerequisites	Basics of economics

Goals	<ol style="list-style-type: none"> To acquaint students with issues of characteristics of directions, kinds, scale and structure of social innovations. To examine the innovative problem-solving process and provide access to tools that students can use to analyse social innovation dilemmas and challenges in their future careers. To learn the functional elements of a socially innovative entity and specifics of social impact.
Knowledge	<ol style="list-style-type: none"> Students name and define the main kinds of innovations in the international economy. Students distinguish features, strategies, concepts, entities and drivers of social innovations. Students describe the changing role of government and entrepreneurs in sustainable development.
Skills	<ol style="list-style-type: none"> Students are able to compare differentiated elements of social innovations and identify various methods for solving social innovation dilemmas and challenges. Students deduce proper conclusions in the innovative processes approach. Students analyse and propose the best solutions for creating social innovations and effective implementation of actions in the international milieu.
Social competencies	<ol style="list-style-type: none"> Students appropriately communicate with the group and lecturer. Students demonstrate liability and engagement for tasks.

Topics – classes	<ol style="list-style-type: none"> Nature of innovations and history of social change. Becoming a changemaker: Introduction to social innovations. Social innovations – new strategies, concepts, ideas, organisations. Main actors of social innovation – “tri-sector athletes”. Trends and drivers re-shaping the dynamics of social innovations. Measuring social impact (principles, approaches, techniques). Methodology for a social innovation project. Sustainability - changing role of government and entrepreneur. Corporate social responsibility. Discussion and critique of leading examples of social innovations.
Topics – projects	<ol style="list-style-type: none"> The strategy of implementation of the socially innovative idea (individual project). Team game devoted to analysing the social impact of innovations (group project). Q&A session dedicated to leading examples of social innovations.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	0%	50%	40%	10%

Author of the syllabus	Magdalena Daszkiewicz	magdalena.daszkiewicz@ue.wroc.pl	B-5
Instructors	Magdalena Daszkiewicz	magdalena.daszkiewicz@ue.wroc.pl	B-5

Description of the course	The course provides students with a basic foundation for understanding all major aspects of social marketing. The program covers the entire social marketing planning process. Students receive knowledge and learn how to prepare social marketing analysis, conduct target audience identification, develop a social marketing strategy and create an effective campaign.
Prerequisites	None

Goals	<ol style="list-style-type: none"> 1. Providing students with knowledge in the field of planning and implementation of social marketing programs and campaigns. 2. Development of skills to plan, manage and evaluate social marketing programs.
Knowledge	<ol style="list-style-type: none"> 1. Students have basic knowledge in the field of social marketing. They know key terms and concepts and understand the social marketing process. 2. Students have detailed knowledge of social marketing planning. They know the procedure of formative research and preliminary analysis, target audience identification, social marketing strategy development and social campaign planning.
Skills	<ol style="list-style-type: none"> 1. Students can use the acquired knowledge to prepare, implement, and evaluate activities related to the social marketing program. 2. Students can apply the known procedures and methods at various stages of the social marketing process. They are ready to implement the acquired knowledge in practice and develop and manage social marketing programs and campaigns.
Social competencies	<ol style="list-style-type: none"> 1. Students have the ability to analyze social problems and suggest ways of solving them through marketing activities. 2. Students have the ability to work in groups (cooperation in planning and creative processes).

Topics – classes	<ol style="list-style-type: none"> 1. Social marketing – key terms and concepts (social marketing and related terms, social marketing-mix, social marketing process). 2. Social marketing planning. Formative research and preliminary analysis (primary and secondary research, social problem analysis, environmental analysis, resources analysis). 3. Target audience identification (segmentation process, selecting a target audience, researching selected segments). 4. Developing social marketing strategy (Setting goals and objectives and positioning statement). 5. Social marketing mix – preliminary plan. 6. Social campaign planning (communication channels, effective messages, creative ideas development). 7. Managing social marketing program (implementation plan, monitoring and evaluation, feedback usage). 8. Social programs and campaigns –different issues, targets, and creations (cases).
Topics – projects	<ol style="list-style-type: none"> 1. Project Part 1: Analysis (problem, environment, resources) and target audience identification. 2. Project Part 2: Social marketing plan (strategy and social campaign).

Description of the course	The course is complementary to "Probability Theory with Applications". It concerns the methods for the presentation, the description and the interpretation of statistical data based on Probability. Basic manners for estimation of statistical parameters are introduced, including their meaning according to Probability. Some methods for dependence analysis are discussed in the 2-dimensional case, especially the linear regression model. The methods of mathematical statistics as the confidence intervals and statistical hypotheses testing are presented, including basic nonparametric tests.
Prerequisites	Mathematics, Probability

Goals	<ol style="list-style-type: none"> 1. Presentation of statistical data. 2. Recognition of statistical dependencies. 3. Verification of statistical hypotheses.
Knowledge	<ol style="list-style-type: none"> 1. A student analyses the research results based on tables and graphs. 2. A student identifies and explains statistical dependencies.
Skills	<ol style="list-style-type: none"> 1. A student calculates and interprets basic statistical parameters. 2. A student calibrates the linear regression model and evaluates its goodness of fit. 3. A student verifies statistical hypotheses and understands a degree of uncertainty.
Social competencies	<ol style="list-style-type: none"> 1. A student is informed that statistical methods are applicable in business. 2. A student is aware that economic phenomena are mostly random.

Topics – classes	<ol style="list-style-type: none"> 1. Data ordering and graphical presentation. 2. Estimation, basic statistical parameters (central tendency, volatility, skewness). 3. Linear dependence, the 2-nd kind regression (linear regression model). 4. Confidence intervals. 5. Introduction to statistical testing, testing errors. 6. Parametric hypotheses. 7. Nonparametric hypotheses.

Description of the course	The course covers the investigation of various tools useful during the strategic analysis process. Each topic is covered using a case study where an industry or company is described and used for further analysis. Moreover, as a second part of the analysis, students search for relevant data and provide detailed analysis.
Prerequisites	Basics of management, strategic management

Goals	To understand the core tools and methods useful in strategic analysis
Knowledge	Identifying the tools and methods useful in the process of strategy formulation and implementation
Skills	1. Ability to implement innovative ideas and present prepared reports 2. Ability to analyse the data gathered.
Social competencies	1. Teamworking. 2. Preparing a professional presentation. 3. Discussing the case studies. 4. Effective communication.

Topics – classes	1. Managerial decision making. 2. Analysis of the firm's environment (micro and macro). 3. Analysis of the firm's resources (intra-organizational analysis). 4. Strategic choice (analysis of relevant options). 5. Cost optimization. 6. Strategy implementation. 7. Strategy communication.
Topics – projects	The research project 'Successful strategy formulation and implementation.'

Winter term	Not in offer	Summer term	In-class

Total hours	Lectures	Tutorials	Computer labs
60 h	30 h	30 h	0 h

	Name	Email	Room
Author of the syllabus	Marzena Stor	marzena.stor@ue.wroc.pl	Z-818
Instructors	Marzena Stor	marzena.stor@ue.wroc.pl	Z-818

Description of the course	<p>The substantial content of the subject makes the effective and efficient development and realization of human resources management (HRM) strategies in business organizations, including multinational companies. And the effectiveness and efficiency are measured based on properly selected HR metrics, benchmarking, data analytics, and specific measures applied to business performance. The main subject of interest covers particular subfunctions of HRM such as staffing the organization with talented employees, training & development, performance management & employee performance appraisal, compensation & benefits, communication with employees, shaping employee engagement, and enhancing the positive employee experience.</p> <p>Special attention is paid to cross-cultural issues within HRM. Furthermore, HRM is discussed from an organization-wide, strategic and international perspective. Thus, the students are taught how to build HRM strategies and programs for their businesses and tie these strategies with business strategies. The class methods include both theoretical lectures and practical assignments.</p>
Prerequisites	Basic knowledge of Economics or General Management

Goals	<ol style="list-style-type: none"> 1. Making students familiar with the fundamental concepts and rules of strategic human resources management both in-home and multinational companies, and with special concern paid to such subfunctions as selection & recruitment, training & development, performance management & employee performance appraisal, compensation & benefits, communication with employees, shaping employee engagement, enhancing employee's positive experience. 2. Making students aware of the impact that the economic, social, political and technological factors of the external environment may exert on HRM strategies and sub-strategies. Creating such conditions in which students can acquire practical skills in creating and correlating particular HRM strategies and sub-strategies with organizational and business strategies. Involving students in higher-order thinking (analysis, synthesis, and evaluation). 3. Making students familiar with the fundamental concepts of managerial competencies necessary for effective people-related decisions. Creating conditions in which students can acquire knowledge and practical skills (competencies) within the scope of creating supportive relationships even when delivering negative feedback. Increasing proficiency in analytical problem-solving.
Knowledge	<ol style="list-style-type: none"> 1. Understanding the complex relationships between business strategy and human resources management. Possessing the knowledge of environmental factors determining HRM strategies. 2. Acquiring the knowledge on the contribution that strategic human resource management can make to organizational performance, including the performance of multinational companies. 3. Receiving the knowledge on particular HRM subfunctions and the metrics and data analytics techniques to measure the impact of overall HRM and its subfunctions on company performance. 4. Being familiar with methods, techniques and instruments that support HRM, both from the perspective of an immediate superior and the perspective of the whole organization, including cross-cultural, international and strategic dimensions.
Skills	<ol style="list-style-type: none"> 1. Capability of identifying and evaluating key HRM issues which critically impact the realization of business strategies, organizational performance, and business competitive advantage. 2. Being able to interpret and integrate HRM into the business strategies and conduct a critical analysis of various methods, techniques, and instruments applied in the particular HRM subfunctions and identify the benefits and drawbacks of each.

	<ol style="list-style-type: none"> 3. Being able to involve international and cross-cultural aspects in HRM in MNCs. Recognizing knowledge and skills needed to develop HRM strategies in a multicultural environment. 4. The capability of conducting a critical self-analysis of own managerial competencies. Being able to conduct a critical analysis of various methods, techniques and instruments applied in HRM. Acquiring the capacity to build positive interpersonal relationships.
Social competencies	<ol style="list-style-type: none"> 1. Developing in-depth and critical evaluation skills using multiple and competing perspectives to prepare high-quality HRM strategies based on empirical data and evidence. Showing skills in formulating constructive criticism. 2. Developing skills to cooperate within a managerial team working out some HRM projects and strategies. Comprehending how to build good interpersonal relationships between functionally and culturally diverse workers and managers. 3. The capability of appreciating and respecting different opinions while possessing the skills of justifying reasonably and rationally own proposals in a way accepted in a given culture. Exhibiting sensitivity to human uniqueness and capacity from the perspective of HRM. 4. Appreciating an ability of knowledge-sharing. Revealing the managerial skills in the scope of various HRM subfunctions. Expressing an ethical attitude and understanding of organizational, individual, legal, societal end economic consequences of taking personnel decisions.

Topics – classes	<ol style="list-style-type: none"> 1. The nature, goals and subfunctions of HRM. 2. The relationships between business and HRM strategies. 3. HR metrics, benchmarking, and data analytics. 4. SHRM in multinational companies. 5. Staffing the organization with talented employees. 6. Measuring performance and providing feedback. 7. Training and development for improved performance. 8. Designing compensation and benefit packages. 9. Competency management in the structure of HRM. 10. Managerial & leadership general competency profiles. 11. Building relationships by communicating supportively. 12. Shaping employee work engagement & job satisfaction. 13. Developing & sustaining employee engagement. 14. Providing and improving employees' positive work experience. 15. Professionalization of managerial decision making.
Topics – projects	<ol style="list-style-type: none"> 4. Developing HRM strategies with ties to business strategies 5. HRM and business performance 6. HRM in the cross-cultural context of MNCs 7. Managerial dilemmas in performance appraisal 8. Boosting employee engagement & positive work experience

Description of the course	The course concerns the use of accounting information in strategic management and performance evaluation. The programme refers to the roles that finance plays in organisations. It describes in detail the activities that finance professionals perform to improve corporate performance. It also focuses on the technologies that define and drive the digital world in which finance operates. The finance function is not the only area of activity in organisations. Finance joins with others to create and preserve value for their organisations. Thus the students will understand how finance can interact with other parts of the organisation to achieve the corporate objectives, those other areas and crucially, the objectives of the whole organisation.

Description of the course	Globalization and the internationalization of economies have opened up many gates and provided plenty of opportunities for companies and individual people. It affected almost all areas of our lives. We meet people from different cultures almost everywhere: at school, university, during professional workshops and trainings, conferences, and at work. This module is designed to sensitize students to the importance of cultural differences during meetings with representatives of other countries. The knowledge of cultural aspects of the business will allow the development of competencies necessary to operate in an international environment.
Prerequisites	Basic international business knowledge

Goals	<ol style="list-style-type: none"> To provide knowledge of the substance of culture and its importance in conducting business activities in an international environment. To provide knowledge of elements of culture that have the biggest influence on international business. Identification of the most common problems and errors related to disregarding cultural differences.
Knowledge	<ol style="list-style-type: none"> A student understands the concept of culture and its main elements, knows and understands main cultural orientations, and identifies areas of international business in the context of national cultures. A student understands what a culture shock is.
Skills	A student can identify and deal with the most common problems of operating in an intercultural environment.
Social competencies	A student can cooperate with partners from different cultures.

Topics – classes	<ol style="list-style-type: none"> Culture – introduction. Cultural awareness, intercultural competence. Stereotypes and prejudices. Elements of culture. Main cultural orientations. Elements of culture in a business context (religion, values, attitudes, customs, traditions, symbolism, taboos). Intercultural communication (direct vs indirect communication, non-verbal communication). Intercultural negotiations and business etiquette. Culture shock.
Topics – projects	Business culture in the selected countries.

	Control work	Individual projects	Group projects	Activity in class
Assessment of achievements	10%	20%	50%	20%
